Patent No. 5801233

GENERAL INFORMATION:

APPLICANT: Haselkorn, Robert

TITLE OF INVENTION: NUCLEIC ACID COMPOSITIONS ENCODING

TITLE OF INVENTION: THEREFOR

NUMBER OF SEQUENCES: 40

CORRESPONDENCE ADDRESS:

ADDRESSEE: Arnold, White & Durkee
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    CITY: Houston

                                                                                                                                                                                                                                                                   Sequence 1, Application US/09392812A

Patent No. 653778

GENERAL INFORMATION:
APPLICANT: Walker, Charles S.
APPLICANT: Walker, Richard G.
APPLICANT: Willingham, Aarron
TITLE OF INVENTION: A Eucaryotic Mechanosensory Transduction Channel
FILE REFERENCE: 02307E-097600US
CURRENT APPLICATION NUMBER: US/09/392,812A
CURRENT FILING DATE: 1999-09-09
NUMBER OF SEQ ID NOS: 17

SOFTWARE: PatentIN Ver. 2.1
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           OTHER INFORMATION: genomic nompC (no-mechanoreceptor potential C); OTHER INFORMATION: nucleotide sequence

Patent No. 6737248

GENERAL INFORMATION:

APPLICANT: Charles Kunsch

TITLE OF INVENTION: Staphylococcus aureus Polynucleotides and Sequences

NUMBER OF SEQUENCES: 5255

CORRESPONDENCE ADDRESS:

ADDRESSEE: Human Genome Sciences, Inc.

STREET: 9410 Key West Avenue

CITY: Rockville

STATE: Maryland

COUNTRY: USA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       59.3%; Score 16.6; DB 4; Length 702; llarity 82.6%; Pred. Sequence 18826, Application US/09270767

Sequence 18826, Application US/09270767

Patent No. 6703491

GENERAL INFORMATION:

TITLE OF INVENTION:

NULleic acids and proteins of Drosophila melanogaster

FILE REFRENCE: File Reference: 7326-094

CURRENT APPLICATION NUMBER: US/09/270,767

CURRENT PILING DATE: 1999-03-17

NUMBER OF SEQ ID NOS: 62517

SOUTHARE: PatentIn Ver. 2.0

SEQ ID NO 18826

LENGTH: 592
APPLICANT: Homburger et al.

Sequence 16913, Application US/09270767

Patent No. 6703491

GENERAL INFORMATION:

GENERAL INFORMATION:

APPLICANT: Homburger et al.

TITLE OF INVENTION: Nucleic acids and proteins of Drosophila melanogaster

FILE REPERBNCE: File Reference: 7326-094

CURRENT APPLICATION NUMBER: US/09/270,767

CURRENT PILING DATE: 1999-03-17

NUMBER OF SEQ ID NOS: 62517

SOFTWARE: PatentIn Ver. 2.0

SEQ ID NO 16913

LENGTH: 977
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     RESULT 48

US-09-270-767-1631/C

Sequence 1631, Application US/09270767

Patent No. 6703491

GENERAL INFORMATION:

APPLICANT: Homburser et al.

TITLE OF INVENTION: Nucleic acids and proteins of Drosophila melanogaster.

FILE REFERENCE: File Reference: 7326-094

CURRENT APPLICATION NUMBER: US/09/270,767

UNMBER OF SEQ ID NOS: 62517

NUMBER OF SEQ ID NOS: 62517

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Description

Sequence 23, Application US/09840707A

Patent No. US20020077276A1

GENERAL INFORMATION:

APPLICANT: Fredeking, Terry M.

APPLICANT: Ignatyev, George M.

TITLE OF INVENTION: INFECTIONS AND WETHODS FOR TREATING HEMORRHAGIC VIRUS

TITLE OF INVENTION: INFECTIONS AND OTHER DISORDERS

FILE REFERENCE: 24881-301C

CURRENT APPLICATION NUMBER: US/09/840,707A

CURRENT APPLICATION NUMBER: 09/662,979

PRIOR FILING DATE: 2000-04-27

NUMBER OF SEQ ID NOS: 26

SOFTWARE: PALENTIN VOI. 2.0

SEQ ID NO 23

Anote="Organ: Bud, Vector: pDNR; Site_1: Sfi1; Site_2: Sfi1; CABUD is a cDNA library of Vitis vinifera cv. Cabernet sauvignon. Clone B dissected buds. Samples were collected May 13, 2002 from pre-bloom plants (10-11 days before bloom), pre-veraison. Sampled vines were located at the University of California, Davis, Experimental Vineyard. cDNAs were made by oligo-dT priming and directionally cloned. 5' and 3' adaptors were used in cloning as follows:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           CF512236

'Cabernet Sauvignon' Clone 8 dissected buds. Samples were collected May 13, 2002 from pre-bloom plants (10-11 days before bloom), pre-veraison. Sampled vines were located at the University of California, Davis, Experimental Vineyard. CDNAs were made by oligo-dT priming and directionally cloned. 5'and 3' adaptors were used in cloning as follows:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Email: asimpsoneludwig.org.br
This sequence was derived from the FAPESP/LICR Human Cancer Genome Project. This entry can be seen in the following URL (http://www.ludwig.org.br/scripts/gethtml2.pl?tl=&t2=0V4-SN0024-200 700-304-a07&t3=2000-07-20&t4=1)
Seq primer: puc 18 forward

Seg primer: M13-Forward
                Constructed at the Institute for Genomic Research (TIGR),
Rockville, MD. Genomic DNA isolated from a cloned population of
Trypanosoma brucei (TREU927/4 GUTat 10.1) was mechanically sheared
to give a tight size distribution (
4 kb). The v + i method used for the library construction is
described in detail in Smith, H. and Venter, J.C. (Making small
insert libraries for whole genome shotgun sequencing projects. In
Genome Sequencing: A Practical Approach, eds. M. Vaudin and B.
Barrell, Oxford University Press, 1999).

Inturbation act the Institute for Genomic Research (TIGR), Constructed at the Institute for Genomic DNA isolated from a cloned population of Trypanosoma brucei (TRED927/4 GUTat 10.1) was mechanically sheared to give a tight size distribution (4 kb). The v + i method used for the library construction is described in detail in Smith, H. and Venter, J.C. (Making small insert libraries for whole genome shotgun sequencing projects. In Genome Sequencing: A Practical Approach, eds. M. Vaudin and B. Barrell, Oxford University Press, 1999).

RNA was isolated from mycelium of P. infestans DDR7602
cultured for 4 weeks in synthetic medium. EST clones were
named by their position in the microtiter plate, preceded
by the prefix MY (for mycelial) and the successive number
of the microtiter plate (e.g. MY-06-A-04)."

ALGA7632 XGC-gastrula Xenopus tropicalis cDNA clone TGas037f09 5', ALG47632
This sequence is from a Xenopus Gene Collection (XGC) library constructed by Aaron M. Zorn.

CONSTRUCTED by Trimed from 5ug of poly A+ RNA from neurula.

ECORI-NoI cut cDNA was then ligated into pCS107 with EcoRI at the 5' end and NoI at the 3' end.

Vector: pCS107; Site 1: EcoRI; Site 2: NoI I HOSE: Escherichia coli DH10B

Sanger Xenopus tropicalis EST project 2001

TROPICALIS. SEQUENCE D: TNeu062m06.plcSP6

Sequencing primer: SP6.

Clones are derived from the bovine BAC library CHORI-240
(http://www.chori.org/bacpac/bovine240.htm). For BAC library
availability, please contact Pieter de Jong (pdejong@mail.cho.org).
Clones may be purchased from BACPAC Resources
(http://www.chori.org/bacpac/ordering_information.htm). This work
was undertaken as part of the International Bovine BAC Mapping
Consortium (IBBMC) by CSIRO Livestock Industries, Australia and the
British Columbia Genome Sciences Centre, Canada.

/ library is oligo-dT primed and directionally cloned
Denatured RNA was size fractionated on a 1% agarose gel.
First strand cDNA synthesis was primed with oligo-dT
primer containing a Not I site. Double strand cDNA was
size selected according tomRNA size fraction, ligated with
EcoR I adaptor, digested with Not I and then cloned
directionally into pxx-Asc vector. Average insert size
0.5-1Kb. Adaptors 5'(AATTCGGCACGAGAGC T18.
Sequencing primers 3'end: T3 promoter primer 5'd
(ATTAACCCTCACTAAAGGA)3'. S' End: T7 promoter primer 5'd
(TAATAACGACTCACTAATAGGG)3'. Average insert size 0.5-1Kb.

//note="Vector: pBluescript II SK+; Site 1: ECORI; Site_2:
Xhoi; The cDNA library was constructed by Keliang Tang, and Robert Cole at Washington University. cDNA was synthesized from poly mRNA using an oligo-dT primer containing a Xhoi site. Pollowing second strand synthesis, EcoRI adapters were ligated to the cDNA, and products were size-selected on sephacryl S500. The cDNA were directionally cloned into the EcoRI/Xhoi prepared pBluescript II SK+ vector, and electroporated into GC10 Competent Cells(PGC). The library may contain a small percentage of host or bacterial contaminants."

//lab_host="Drilor of the cold tissue auxin treated"
//lab_host="Drilor of the cold library was carried out
using Stratagenes 'UnizAP - cDNA sytthesis kit'. cDNA was
constructed using an oligo dT primer/linker that contains
a Xho1 site within it. Following ds cDNA synthesis,
ECORI adapters were ligated to the blunt ends and sample
was digested with Xho1. The result is cDNA with an ECORI
sticky end on one side and a Xho1 sticky end on the other.
This cDNA was ligated directionally in UnizAP arms. The
vector is designed containing the pBluescript sequence as
well as lambda DNA and cDNA is cloned within this
pBluescript sequence. The vector was then packaged using
Gold gigapackaging extracts. Library was grown in XLIBlue
MRF' cells and amplified. The library was excised by mass
excision using Stradesens 'Mass excision kit' that uses
exassist as a helper phage that releases the pBluescript
sequence and circularises it as single stranded plasmids
that are then packaged (by helper phage) and secreted out
of the host cell as phagemids. SOLR cells were transformed
with phagemids and the library was plated out on LB-amp
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     CH230-39416.TJ CHORI-230 Segment 2 Rattus norvegicus genomic clone BZ130579

The library was constructed by Claire Murphy and Dr. James McCarter
at Washington University, St. Louis. Oligo(dT)-SL2 PCR based
library. CDNA PCR products of size >400 nucleotides containing SL2
on the 5' end and oligo(dT) on the 3' end were non-directionally
cloned into pCRII-TOPO(Invitrogen) following the Topo TA cloning
protocol. Intestine RNA was provided by Dr. Douglas Jasmer of
Mashington State University (djasmer@vetmed.wsu.edu).
Seq primer: SL1 primer
High quality sequence stop: 525.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            GSS 19-JUL-2001

with water, nystatin and cefotaxime in covered crystallization dishes. Five-day old seedling shoots were then harvested, total RNA was prepared, poly(A) RNA was purified, one primary unamplified cDNA library was made, and 1 million pfu were in vivo excised to give pBluescript SK(-) cDNA phagemids. These steps were performed in the TU Close laboratory at the University of California, Riverside (Choi, Close, Fenton). Phagemids were plated and picked at the Clemson University Genomics Institute (CUGI) (Begum, Palmer, Frisch, Atkins and Wing). Plasmid DNA preparations, DNA sequencing and sequence analysis were performed at CUGI (Wing, Yu, Frisch, Henry, Simmons, Oates, Rambo, Main). The sequence has been trimmed to remove vector sequence and contains a minimum of 100 bases of phred value 20 or above. For more details on library conditions in the dark at room temperature on filter paper preparation and sequence analysis see http://www.genome.clemson.edu/projects/barley.
